NewTek™

When you need to bring more sources into your NewTek TriCaster™, use the BrightEye™ NXT Router from Ensemble Designs. You set up BNCs as inputs or outputs, allowing you to maximize the router's configuration for your production. BrightEye NXT's built-in clean switches let you use cameras and other sources that don't have a reference. The output of the BrightEye NXT Router will be in time at the input of the TriCaster. The LCD on the front of the router lets you see your sources in realtime before you do a take. Plus, the BrightEye NXT's built-in web server lets you monitor and control your router from a web browser. TriCaster protocol is included in the BrightEye NXT Router, making integration a snap.

Bring More Sources Into Your TriCaster

The BrightEye NXT 410 Clean HDMI Router handles SDI, HDMI and also has an SFP cage, allowing you to add your preferred connectors, such as fiber optic or mini BNC.

The BrightEye NXT 430 Clean Router and BrightEye NXT 415 Router are configurable as 13x2, 2x13 or anything in between. Two SFP cages allow you to add additional I/O.
