

Do you need to Save Money and Reduce Bandwidth?

Use the BrightEye NXT's Dual Path Feature

DualPath - One Path, Two Signals

- No, you are not going to lose 50% of your data!
- Proprietary image scaling ensures the very best image quality. Retain all of the inherent elements of pixel quality in native HD SDI
- We do the DualPath multiplexing and demultiplexing at end points, which requires no changes to the existing link
- No Lip-sync errors. Audio and video are locked together and travel as one signal from source to destination
- DualPath included with Multi Image license option for BrightEye NXT's
